Web Announcement 1902

## **Attention All Providers: Current Instructions for Billing Vaccines for Children and Adults**

Please disregard all previous web announcements regarding billing vaccines as the following information supersedes the previous billing instructions. When billing vaccines, please follow the current and appropriate procedures, which can be found in the Medicaid Services Manual (MSM) chapters listed below. Please note the differences between billing vaccines for children versus adults.

- **Vaccines for Children**

Nevada Medicaid and Check Up does not reimburse providers for Vaccines for Children (VFC) vaccines. Nevada Medicaid will reimburse providers for the administration using the most appropriate Current Procedural Terminology (CPT) code. For additional information, please refer to [MSM Chapter 1500 Healthy Kids Program \(EPSDT\)](#) and the [Provider Types 20, 24 and 77 Billing Guide](#).

For additional information on VFC patient eligibility, visit the [Nevada Division of Public and Behavioral Health VFC Program website](#).

- **Vaccines for Adults**

Nevada Medicaid will reimburse providers for the vaccine and administration. For the vaccine serum, the provider must use the appropriate National Drug Code (NDC) and for the administration the provider must use the most appropriate CPT code. For additional information, please refer to [MSM Chapter 1200 Prescribed Drugs](#).
