## **EDI Announcement: Nevada Medicaid Version 5010 Solution Limits Diagnosis Codes on 837P Transactions**

In the Nevada Medicaid electronic Accredited Standards Committee (ASC) X12 Version 5010 technical solution that was implemented on January 1, 2012, Version 5010 data is packaged as Version 4010 data. This Version 5010 technical solution limits diagnosis codes on 837P – Professional Health Care Claim and Encounter transactions to no more than eight (8).

Nevada Medicaid will accept up to twelve (12) diagnosis codes; however, if the primary diagnosis code pointer does not point to one of the first 8 codes, the claim may be denied. Please include only the first 8 diagnosis codes on Version 5010 837P transactions.

For Nevada (ASC) X12 5010 questions, please contact the EDI support team at
