Nevada Medicaid Web Announcement 3096

Availability of the “Revalidate Provider” Link to Start Revalidation Application

A revalidation application should only be submitted up to one year prior to a provider's revalidation due date. Effective June 20, 2023, the Provider Web Portal will only display a “Revalidate Provider” link on the Provider Locations page if the provider’s revalidation due date is within one year of their current login date. If a provider previously submitted a revalidation application and their revalidation due date is more than a year in advance, they will no longer be able to access that revalidation application. A new revalidation application will need to be started once they are within a year of their revalidation due date.

In the following example that shows the “Action” column on the Provider Locations page, the first provider’s revalidation due date is over a year from the current login date. The second provider has a revalidation due date within the year, as indicated by the availability of the “Revalidate Provider” link.

Action
Update Demographics OR Update Provider
Update Demographics OR Update Provider OR Revalidate Provider

Reminder: Providers are reminded that to avoid contract termination, your revalidation application must be processed and approved prior to the revalidation due date. Providers may revalidate up to a year in advance of their revalidation due date.
